Information for Contributors

Brain and Cognition publishes original research articles, case histories, critical reviews, and scholarly notes; contributions will be concerned with any aspect of human neuropsychology, other than language. Appropriate topics include movement, perception, praxis, emotion, memory, and cognition, in relationship to brain structure and function. *Brain and Cognition* will publish experimental research papers, clinical case histories, reviews, short notes (limited to under 10 pages typed), and discussion/commentary articles. Book reviews may be submitted for publication and will also be solicited; of particular interest are those book reviews that, in addition to critically summarizing a book's content, make a scholarly contribution in their own right.

Submission of Manuscripts. Manuscripts should be submitted to:

Brain and Cognition
Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Brain and Cognition* represent the opinions of the author(s) and should not be construed to reflect opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Authors should submit manuscripts in *quadruplicate* (one original and three copies), typewritten, double-spaced on one side of 8½ × 11-in. white paper. The original and two copies of all artwork, tabular material, photographs, etc., must also be included. All pages should be numbered consecutively.

Page 1 should contain the article title, author(s) name(s) and affiliation(s), abbreviated form of the title for the running page heading (not to exceed 35 characters including letters and spaces), and the complete mailing address of the author to whom all correspondence should be sent. *Page 2* should contain a short *abstract* of approximately 100 words.

Papers must be written in English. Language data may be given in English when clearly identifiable, otherwise it should be transcribed into the phonetic alphabet of the International Phonetic Association (IPA).

Figures should be numbered in order of appearance (with Arabic numerals) and should have short descriptive captions (typed double-spaced on a separate page). Line drawings must be originals in black India ink on white paper, on polyester drafting film, or comparable glossy black and white photographs. Lettering should be uniform, professionally done, and large enough to be fully legible after a 50–60% reduction in printing. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be numbered in order of appearance (with Arabic numerals); they should be typed double-spaced on a separate page. Each table should have a short descriptive title typed (double-spaced) above the table. Footnotes to tables (indicated by superscript lowercase letters, ^{a,b}, etc.) should be typed (double-spaced) at the end of the table. Keep in mind the dimensions of the journal when planning the number of columns in a table.

Footnotes to the text should be kept to a minimum; when necessary, they should be indicated by superscript Arabic numerals,^{1,2} etc., cited consecutively throughout the article, starting with the title. They should be typed double-spaced on a separate page.

References should be cited in the text by surname of the author and the publication date in parentheses, e.g., Goldstein (1980) or (Russell & Espir, 1981). If more than one paper was published by the same author in a given year, the correct style is Broca (1982a) or Broca, (1982b).

References should be listed alphabetically, typed double-spaced at the end of the article. All references cited in the text must be listed at the end of the paper. Journal titles should be written out in full, not abbreviated. Note the following examples.

Fromkin, V. 1980. *Errors in linguistic performance*. New York: Academic Press.

Kamptner, L., Kraft, R. H., & Harper, L. V. 1985. Lateral specialization and social-verbal development in preschool children. *Brain and Cognition*, 3, 42-50.

Bryden, M. P. 1978. Strategy effects in the assessment of hemispheric asymmetry. In G. Underwood (Ed.), *Strategies of information processing*. New York/London: Academic Press.

(Use underlining for journal and book titles only.)

Proofs. Proofs will be sent to the designated author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty (50) reprints without covers will be provided free of charge for articles. Additional reprints may be purchased; an order form will be included with proofs.

JOURNAL OF MATHEMATICAL PSYCHOLOGY

EDITOR

James T. Townsend

Purdue University, West Lafayette, Indiana

The *Journal of Mathematical Psychology* is concerned with empirical research directly relevant to theoretical questions within psychology and presents research articles, monographs and reviews, notes and comments, and book reviews in all areas of mathematical and theoretical psychology. The journal emphasizes the development or experimental testing of psychological process models. Work in fundamental measurement also falls within this journal's area of interest.

Research Areas Include

- Artificial intelligence and computer simulation (e.g., computational vision as applied to human vision) of psychological processes
- Fundamental measurement or scaling
- Human factors and human-computer interaction
- Learning and memory
- Motivational dynamics
- Neural networks and neural modeling
- Neuropsychological theories
- Perception and/or psychophysics
- Problem solving
- Psycholinguistics
- Psychometric research that bears on the explication of psychological concepts or process models

New For Neurobiologists

NEURAL MODELS OF PLASTICITY

Experimental and Theoretical Approaches

edited by

John H. Byrne and William O. Berry

This book explores the two separate approaches, one theoretical and the other empirical, that are currently used to explore the role of neuronal plasticity in learning, memory and complex brain functions. While these two approaches have traditionally been used independently, there is a growing realization among neurobiologists, psychologists and adaptive systems theorists that progress in understanding the brain is dependent upon a combined use of both approaches.

BRAIN MESSENGERS AND THE PITUITARY GLAND

Eugenio E. Müller
and Giuseppe Nisticò

This book is an integrated presentation of basic and clinical research on neuropeptides, neurotransmitters, their control of the anterior pituitary hormones, and how derangement in their functional activity may be one underlying basis for neuroendocrine disorders. The authors discuss the complexity of the mechanisms controlling neuroendocrine function and the different ways different messengers (e.g., neurohormones, neurotransmitters, neuromodulators)

interact with one another, and they introduce the concept that some neuroendocrine disorders (i.e., some GH-deficient states, hypogonadotropic hypogonadism) may be attributable to a primary neurotransmitter dysfunction. They also review the use of specific neuroactive compounds as probes of neuroendocrine function and some of the misinformation that may be derived from the use of nonspecific neuroactive compounds.
